                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a method for the protection against infection of a polkilothermic fish by the bacterial pathogen, Piscirickettsia salmonis. The method comprises administering an immunogenic amount of a ospa in the form of a vaccine termed Ospa, or an immunogenic fragment of P. salmonis. The method is also useful for protecting animals, rickettsial septicaemia (SRS) and other ricketterial pathogen sequence represents DNA encoding the P. salmonis. The method is also useful for protecting against salmonid protectin with an N-terminal (SRS) and other rickettsial diseases. The present an anti-ospa antibody response.
                                                                                                                                                                                                                                                                               121
                                                                                                                                                                                                                                                                                                  121

                              This invention relates to a method for the protection against infection of a polkilothermic fish by the bacterial pathogen, Piscirickettsia salmonis. The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals, particularly polkilothermic fish, against the bacterial pathogen P. salmonis. The method is also useful for protecting against salmonid rickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence The primer is used in the construction of pTYB1-17kD, which is used to express optimised OspA antigen with a C-terminal fusion partner. The OspA fusion protein is used in a vaccine to create an anti-OspA antibody manufacture in the construction of pTYB1-17kD, which is
                                                                                                                                                                                                                       Method for protecting poikilothermic fish against salmonid rickettsial septicaemia and other rickettsial diseases comprises administering a vaccine containing the OspA protein of Piscirickettsia salmonis -

                                                                           salmonis. The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals, particularly pointilothermic fish, against the bacterial pathogen P. salmonis. The method is also useful for protecting against salmonid rickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence represents a PCR primer used to amplify the P. salmonis OspA DNA sequence. The primer is used in the construction of DTMBI-17kD, which is used to express optimised OspA antigen with a C-terminal fusion partner. The OspA fusion protein is used in a vaccine to create an anti-OspA
                                                                                                                                                                                                                                                                                                                                                This invention relates to a method for the protection against infection of a polkllothermic fish by the bacterial pathogen, Piscirickettsia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    17-SEP-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CA2281913-A1

CC and flanked the human CTLA-4 locus were cloned and sequenced. The CC sequence data was assembled into a contiguous sequence that is presented CC in AAA95363-68. AAA95363-68 de comprise BAC clone 22700, and AAA96365-68 CC microsatellite repeat (PMR) sequences. The specification describes a CC autoimmune disease. The method comprises detecting a pMR sequence in the CC D28, ICOS gene or CTLA4 gene of the human costimulatory receptor gene CC then be detected by rapid and convenient high resolution processes. The method is useful for determining the predisposition of a human subject to develop CC Locus (hCGRL). PMR sequences vary in length among individuals and can be complified to generate products that differ in size. These products can cc method is useful for determining the predisposition of insulin-dependent CC method is useful for determining the predisposition of insulin-dependent CC diabetes mellitus (IDDM), Addison's disease, Graves disease, autoimmune

```
The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to grevent, treat or ameliorate a medical condition in e.g. humans, mice, CC to a pathological condition. Antibodies to the proteins can also used in diagnosing a pathological condition or susceptibility concerns and in alleviating symptoms associated with the disorders and in CC include autoimmune diseases, g. radioimmunoassays or enzyme linked CC include autoimmune diseases e.g. remunatoid arthritis.

CC ardiovascular disorders e.g. neoplasms of the breast or liver, CC alzement's disease, infections caused by bacteria, viruses and fungic cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. corneal infection, and many other bused to aid wound healing and epithelial cell proliferation, to regenerate tissues and in chemotaxis. The polypeptides can also the cregenerate tissues and in chemotaxis. The polypeptides can also be compabilities, fat content, lipid, protein, carbohydrate, vitamins, cofactors and other nutritional components. The present corneal secreted protein of the invention.

The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAN71109 standard; DNA; 3659 BP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a recombinant DNA autonomously sequence coding for an aspartokinase (AK) in which feedback inhibition a dihydropticolinate reductase (DHPR), a DNA sequence coding for dihydropticolinate reductase (DHPR), a DNA sequence coding for diaminopimelate decarboxylase (DHPS), a DNA sequence coding for aspartate aminotransferase (AAT). The present sequence coding for appresent invention, can be used for improving L-lysine products from the DNA and related products from the DNA can be used for improving L-lysine productivity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     132 GCTGTTTGGTAAAGGTAG 149

                                                                      Sequence 3776 BP;
                                              Novel EPH-related PTK cDNA clone Cek9 (given in AAQ90655) was isolated from a chick embryo library in lambda. Cek9 protein (AAR75707) is closely related to Cek5 (AAR75712). In adult tick9 expression is predominant in the thymus and detectable in brain, retin, kidney, lung and heart.

                                                                                                                                                                                                                                         A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome. AAX12938 to AAX13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated Enterococcus faecalis polynucleotides and polypeptides used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL040-ABL16175) and the encoded proteins (ABB57737-ABB72072).

* NOTE: This is a 'working draft' sequence. It currently
consists of 4 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Galagan, J., Gardyna, S., Grant, G., Hagos, B., Heaford, A., Horton, L., Howland, J.C., Johnson, R., Jones, C., Kann, L., Karatas, A., Klein, J., Lehozak, J., Lieu, C., Locke, K., Macdonald, P., Marquis, N., McEwan, P., McGurk, A., McKernan, K., McLaughlin, J., Meldrim, J., Morrow, J., Naylor, J., Norman, C.H., O'Connor, T., O'Donnell, P., Peterson, K., Pollara, V., Riley, R., Roy, A., Santos, R., Severy, P., Stange Thomann, N., Stojanovic, N., Subramanian, A., Talamas, J., Tesfaye, S., Tirell, A., Vassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Thenson, M., Wassiliev, H., Vo, A., Wheeler, J., Wu, X., Wassiliev, H., Vo, A., W
